

Environmental Policy

DONECK EUROFLEX S.A. operates in the chemical industry. This entails a **particular responsibility for the environment**, and the company is aware of this, which is why an **environmental management system under EN ISO 14001** was introduced in 2010. We commit to implementing a permanent improvement process involving all staff members. **Our aim is to spare as much energy, waste and resources as possible.** This is communicated openly and transparently through signs, instructions and rules, and is especially important for waste, because incorrect disposal of chemical products can cause serious damage.

The effectiveness of environmentally relevant mechanisms and processes is regularly challenged in order to minimise risks to the environment. Any faults are traced, and weaknesses eliminated. Maintenance and inspection plans are formulated and upheld. And when it comes to waste volumes, our actions consistently revolve around the principle of „Avoidance before reuse, reuse before recycling, and recycling before disposal“.

We think green!

Under our environmental program started in 2018, „We think green!“ Doneck has established internal projects, e.g. water coolers for all employees, multi-use instead of single use, avoiding unnecessary waste, waste separation and an environmentally friendly fleet of vehicles (eGolf, Euro 6 standard trucks).
